## Extremely long service life under extreme conditions – iglidur® Z

Excellent wear resistance especially with high loads

High thermal resistance

For extreme loads

For high surface speeds

Resistant to edge loads

Lubrication and maintenance-free

Standard range from stock

Excellent wear resistance especially with high loads

High thermal resistance

For extreme loads

For high surface speeds

Resistant to edge loads

Extremely high compressive strength coupled with high elasticity enables iglidur® Z bearings to attain their prominent features in association with soft shafts, edge loads and impacts. The bearings are at the same time suitable for temperatures up to +250 °C.

**When to use it?**

- For continuous temperatures up to +250 °C long-term or +310 °C short-term
- When high wear resistance is required especially under high radial loads
- For high surface speeds
- For edge loading in connection with high surface pressures

**When not to use it?**

- For low loads and temperatures
  - ▶ iglidur® P, page 113
- When a cost-effective general purpose bearing is required
  - ▶ iglidur® G, page 79
- When electrically conductive bearings are needed
  - ▶ iglidur® F, page 449
  - ▶ iglidur® H, page 313
  - ▶ iglidur® H370, page 305

**Typical application areas**

- Construction machinery industry
- Machine building
- Textile industry
- Aerospace engineering
- Glass industry

**Material properties**

General properties	Unit	iglidur® Z	Testing method
Density	g/cm³	1.40	
Colour		brown	
Max. moisture absorption at +23 °C/50 % r.h.	% weight	0.3	DIN 53495
Max. water absorption	% weight	1.1	
Coefficient of sliding friction, dynamic, against steel	μ	0.06–0.14	
pv value, max. (dry)	MPa · m/s	0.84	
Mechanical properties			
Flexural modulus	MPa	2,400	DIN 53457
Flexural strength at +20 °C	MPa	95	DIN 53452
Compressive strength	MPa	65	
Max. recommended surface pressure (+20 °C)	MPa	150	
Shore-D hardness		81	DIN 53505
Physical and thermal properties			
Max. long-term application temperature	°C	+250	
Max. short-term application temperature	°C	+310	
Min. long-term application temperature	°C	-100	
Heat conductivity	W/m · K	0.62	ASTM C 177
Coefficient of thermal expansion (at +23 °C)	K <sup>-1</sup> · 10 <sup>-6</sup>	4	DIN 53752
Electrical properties			
Specific contact resistance	Ωcm	> 10 <sup>11</sup>	DIN IEC 93
Surface resistance	Ω	> 10 <sup>11</sup>	DIN 53482

**Table 01: Material properties table**

**Diagram 01: Permissible pv values for iglidur® Z bearings with a wall thickness of 1 mm dry running against a steel shaft, at +20 °C, mounted in a steel housing**

**Moisture absorption**

The humidity absorption of iglidur® Z bearings amounts to about 0.3% weight in standard climatic conditions. The saturation limit in water is 1.1% weight.

▶ Diagram, [www.igus.eu/z-moisture](http://www.igus.eu/z-moisture)

**Vacuum**

In vacuum, moisture is released as a vapour. Only dehumidified bearings made from iglidur® Z are suitable for vacuum.

**Radiation resistance**

Plain bearings made from iglidur® Z are resistant to radiation up to an intensity of 1 · 10<sup>5</sup> Gy.

**UV resistance**

Exposed to UV radiation, iglidur® Z bearings lose approximately 50% of their tribological properties (wear resistance).

Medium	Resistance
Alcohols	0
Hydrocarbons	+
Greases, oils without additives	+
Fuels	+
Diluted acids	+
Strong acids	-
Diluted alkalines	+
Strong alkalines	-

+ resistant 0 conditionally resistant – not resistant

All data given at room temperature [+20 °C]

**Table 02: Chemical resistance**

▶ Chemical table, page 1478

In addition to iglidur® X, iglidur® Z is among the best selling iglidur® high-temperature materials. Specifically worth noting is the outstanding wear behaviour under extreme conditions (high loads and temperatures).

### Mechanical properties

With increasing temperatures, the compressive strength of iglidur® Z plain bearings decreases. The diagram 02 shows this inverse relationship. The recommended maximum surface pressure is a mechanical material parameter. No conclusions regarding the tribological properties can be drawn from this.

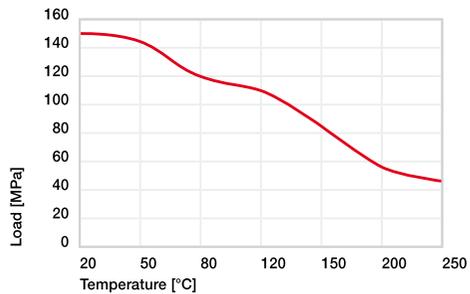

Diagram 02: Permissible maximum surface pressure of as a function of temperature (150 MPa at +20 °C)

iglidur® Z is suitable for both medium and – due to its high heat resistance – high speeds. Diagram 03 shows the elastic deformation of iglidur® Z at radial loads. At the recommended maximum surface pressure of 150 MPa the deformation is about 5.5 % at room temperature.

► Surface pressure, page 41

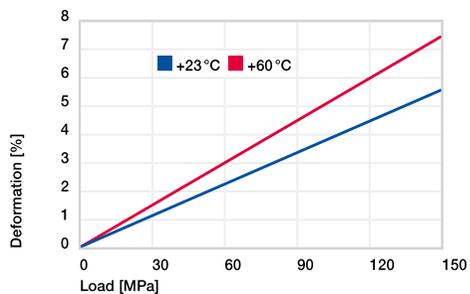

Diagram 03: Deformation under pressure and temperature

### Permissible surface speeds

iglidur® Z is a high temperature bearing material, which is suited for applications with very high specific loads. The maximum values shown in table 03 can only be achieved at low pressures. At the given speeds, friction can cause a temperature increase to maximum permissible levels. In practice, though, this temperature level is rarely reached due to varying application conditions.

► Surface speed, page 44

m/s	Rotating	Oscillating	Linear
Continuous	1.5	1.1	5
Short-term	3.5	2.5	6

Table 03: Maximum surface speeds

### Temperatures

The maximum permissible short-term temperature is +310 °C. The ambient temperatures in the bearing system also have an effect on the bearing wear. The wear rate rises with increasing temperatures. At high temperatures iglidur® Z is also the most wear resistant material when running dry. At temperatures over +145 °C an additional securing is required.

► Application temperatures, page 49

► Additional securing, page 49

### Friction and wear

The coefficient of friction declines just as the wear resistance with increasing load (diagrams 04 and 05).

► Coefficients of friction and surfaces, page 47

► Wear resistance, page 50

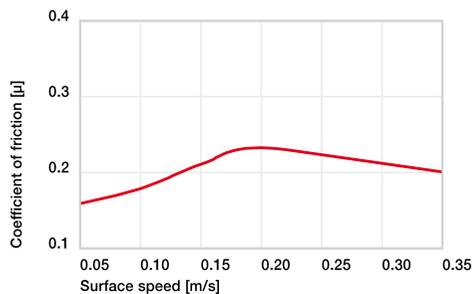

Diagram 04: Coefficient of friction as a function of the surface speed, p = 0.75 MPa

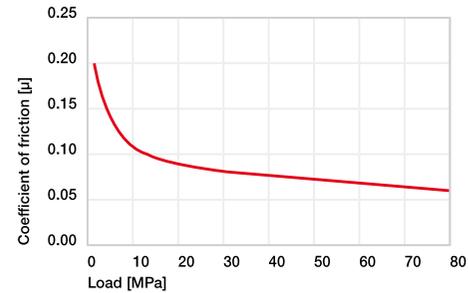

Diagram 05: Coefficient of friction as a function of the pressure, v = 0.01 m/s

### Shaft materials

Diagram 06 shows wear rates in the lower load range, which are very similar to those of other wear resistant iglidur® materials. However, in the upper load range iglidur® Z outperforms all other materials in wear resistance. Provided a Cf53 hardened and ground steel shaft is used, the wear is at 45 MPa still only 15 μm/km.

At low loads iglidur® Z plain bearings wear less in oscillating operation than in rotation. 304 stainless steel and hard chromed shaft are of interest here.

► Shaft materials, page 52

iglidur® Z	Dry	Greases	Oil	Water
C. o. f. μ	0.06–0.14	0.09	0.04	0.04

Table 04: Coefficient of friction against steel (Ra = 1 μm, 50 HRC)

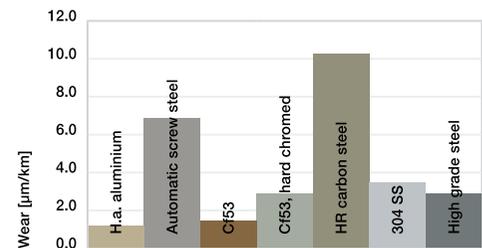

Diagram 06: Wear, rotating with different shaft materials, p = 1 MPa, v = 0.3 m/s

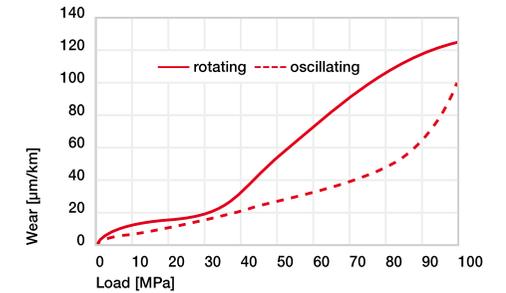

Diagram 07: Wear for oscillating and rotating applications with shaft material Cf53 hardened and ground steel, as a function of the pressure

### Installation tolerances

iglidur® Z plain bearings are standard bearings for shafts with h-tolerance (recommended minimum h9). The bearings are designed for pressfit into a housing machined to a H7 tolerance. After being assembled into a nominal size housing, in standard cases the inner diameter automatically adjusts to the F10 tolerances. For particular dimensions the tolerance differs depending on the wall thickness (please see product range table).
