

- > Ø 20 ... 80 mm
- > Corrosion-resistant
- > New lightweight design extrusion with universal mounting grooves
- > Proven and patented sealing system
- > Dust protection as standard
- > Up to 10% higher loading values against internal guiding series M/46000
- > Interchangeability with series VM/46000

Technical features

Medium:

Compressed air, filtered, lubricated or non-lubricated

Operation:

VM/146000, VM/146100 Double acting, adjustable cushioning

VM/146000/M, VM/146100/M

Double acting, adjustable cushioning and magnetic piston

Models:

VM/146000 with internal guide
VM/146100 with external adjustable guide

Operating pressure:

1 ... 8 bar (14 ... 116 psi)

Cylinder diameters:

20, 25, 32, 40, 50, 63, 80 mm

Maximum strokes:

3500 mm

Operating temperature:

-30 ... +80°C (-22 ... +176°F) max.

Air supply must be dry enough to avoid ice formation at temperatures below +2°C (+35°F).

Materials:

End covers, closer, carriage and top cover: aluminium diecast hardcoated, aluminium hardcoated (Ø 20 & 80)

Yoke: aluminium, plastics (Ø 20)

Guiding bridge and profile barrel: aluminium hardcoated

Seal strip, wiper and piston seal: PU

Cover strip: polyamide

Other seals: NBR

Mounting screws: stainless steel (A2)

Shim ring: stainless steel (A2)

Loading values for LINTRA® cylinders with double carriages

The values given in the table below show the single forces in the directions Fy and Fz and the maximum moments Mx, My and Mz. All values are applicable only for speeds of max. 0,2 m/s. A requirement for using these values is a constant movement (no jerking) of the mass over the whole stroke length of the cylinder. The reference point from which the moments for all cylinders should be calculated is the centre line of the pistons. For speeds up to 2 m/s please use our calculation programme LINTRA® PNEUCALC. It is available upon request.

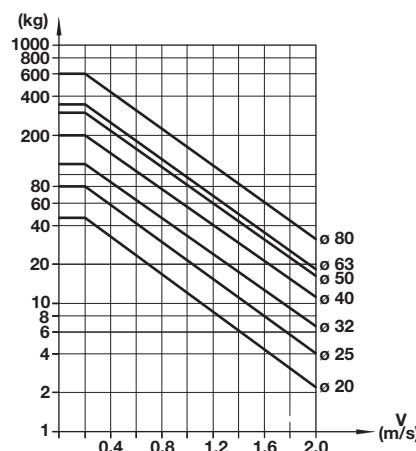

When a LINTRA® cylinder has to take several loads and moments, an additional calculation is necessary using this formula:

$$\frac{M_x}{M_{x\max}} + \frac{M_y}{M_{y\max}} + \frac{M_z}{M_{z\max}} + \frac{F_y}{F_{y\max}} + \frac{F_z}{F_{z\max}} \leq 1$$

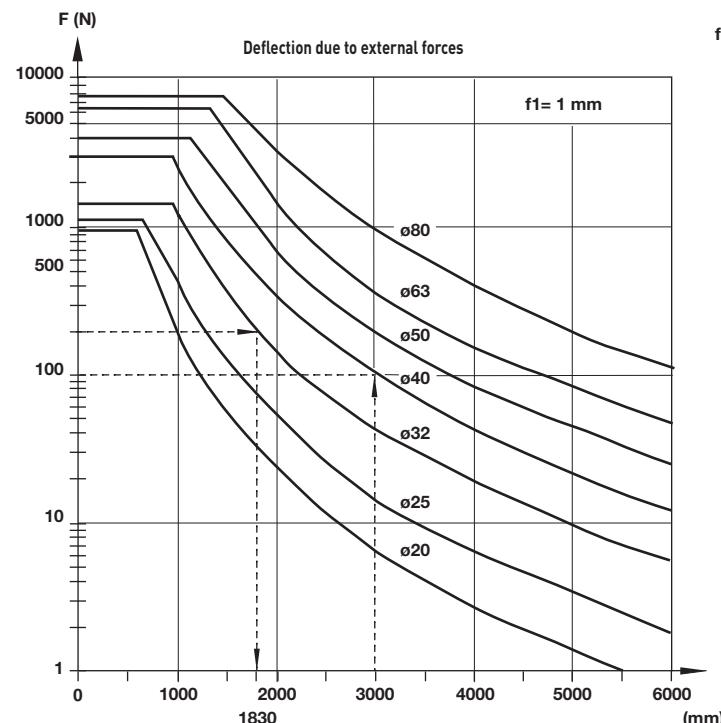

| Ø | Internal guide VM/146000 | | | External guide VM/146100 | | | | |
|----|--------------------------|--------|---------|--------------------------|---------|------------|---------|-------------|
| | Fy (N) | Fz (N) | Mx (Nm) | My (Nm) | Mz (Nm) | Fy, Fz (N) | Mx (Nm) | My, Mz (Nm) |
| 20 | 90 | 280 | 0,9 | 12 | 3,6 | 470 | 6 | 18 |
| 25 | 125 | 385 | 1,5 | 19 | 5,6 | 590 | 9 | 28 |
| 32 | 165 | 500 | 3 | 33 | 10 | 780 | 17 | 43 |
| 40 | 330 | 990 | 6,5 | 84 | 24 | 1600 | 39 | 110 |
| 50 | 440 | 1320 | 11 | 120 | 35 | 2000 | 65 | 160 |
| 63 | 690 | 2000 | 20 | 240 | 70 | 3200 | 120 | 350 |
| 80 | 780 | 2300 | 27 | 360 | 100 | 3900 | 180 | 520 |

Cushioning Performance

The dynamic energy of a LINTRA® cylinder is caused by direct or partial external loads which must be absorbed by pneumatic cushioning. The cushioning ability depends to a large extent on the pneumatic circuit (e. g. counter pressure, pre-exhaust). The values given in the diagram were tested with an operation pressure of 6 bar using a 5/2 control valve. When installed horizontally, depending upon the speed, dynamic energy can be absorbed by the cylinder. Whenever the values given in the diagram are exceeded, the transported mass must be cushioned by additional shock absorbers. These have to be located at the center of gravity of the mass.

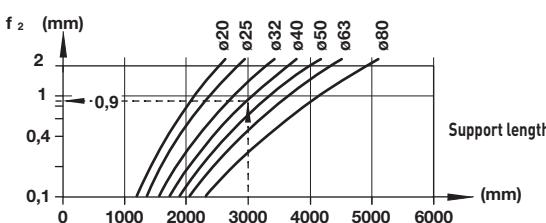

Cylinder deflection

Example:

Cylinder Ø 32 mm, stroke length 3500 mm, external load 200 N and a deflection about 1 mm. Maximum distance between supports = 1830 mm (see diagrams). Therefore an additional support is required.

Deflection due to cylinder weight

Example:

Cylinder Ø 40 mm, external force 180 N, distance between supports 3000 mm

Required: total deflection

1. Deflection due to external force (f1)

see Diagram 1 (1mm/100 N) · 180 N

2. Deflection due to cylinder weight diagram 2

Total deflection:

1,8 mm

+ 0,9 mm

2,7 mm

Max. permitted deflection ($f_1 + f_2$) <

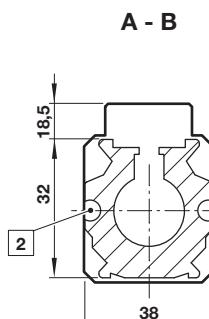

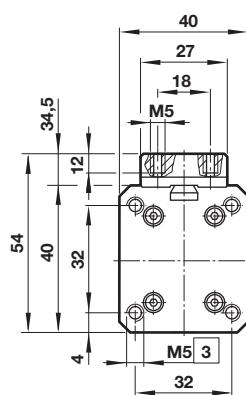

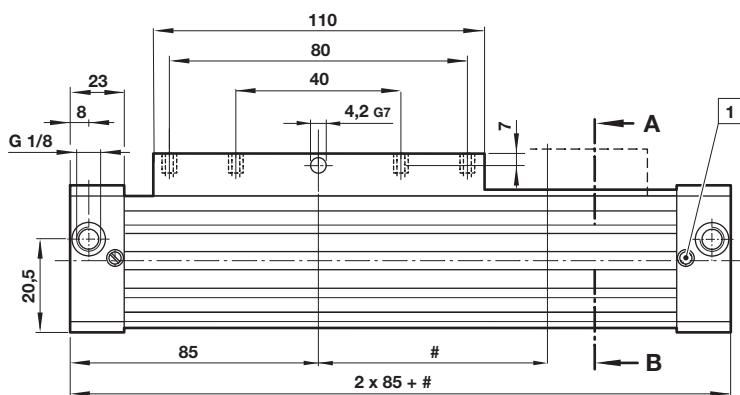

1 mm

1000 mm Hub

A deflection of more than 3 mm
is not permitted.

Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under

»Technical features/data«.

Before using these products with fluids other than those specified, for non-industrial applications, life-support systems or other applications not within published specifications, consult IMI NORGREN.

Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes.

The system designer is warned to consider the failure modes of all component parts used in fluid power systems and to provide adequate safeguards to prevent personal injury or damage to equipment in the event of such failure.

System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.

System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.
